COVID-19 TEST REPORT

Patient

Name **Mohsin Zeeshan (Travelling: Yes)**
Age **37**
Gender **Male**
Date of birth **October 14, 1983**
Nationality **Pakistan**
ID Number **AA0114973**

BH-LAB-02-PROCESS

Juba South Sudan

COVID-19 (SARS-COV-2), BY RT-PCR

Specimen collection method

Nasal Swab

Collected on

Thursday, January 7, 2021 9:46:27

Received on

Not specified

Date of Result

January 8, 2021 11:18:47

SARS-CoV-2 Result

**Not Detected
(NEGATIVE)**

Notice:

Not Detected: : Not detected indicates that SARS-CoV-2 RNA is either not present in the specimen or is present at a concentration below the assay's lower limit of detection. This result may be influenced by the stage of the infection and the quality of the specimen collected for testing. Repeat test if deemed necessary after 72 hours.

Detected: : Detected indicates that SARS-CoV-2 RNA is present in this specimen. Results should be interpreted in the context of all available laboratory and clinical findings.

To help prevent the spread of COVID-19, everyone should: - Clean your hands often, either with soap and water for 20 seconds or a hand sanitizer that contains at least 60% alcohol. - Avoid close contact with people who are sick. - Put distance between yourself and other people (at least 6 feet). - Cover your mouth and nose with a mask when around others. - Cover your cough or sneeze with a tissue, then throw the tissue in the trash. - Clean and disinfect frequently touched objects and surfaces daily. - Its recommended that people wear masks in public settings and when around people outside of their household, especially when other social distancing measures are difficult to maintain. - Masks may help prevent people who have COVID-19 from spreading the virus to others.
